

InvoBridge

NRS e-Invoicing Compliance

Fast-track ERP integration to a secure, auditable and future-ready e-invoicing platform.

Business OS-centric

**Automated
compliance**

**Enhanced
security**

Future-ready

Introducing Infonomics

Accredited system integrator and access point provider for NRS e-Invoicing delivery.

For over ten years, we have been delivering scalable, standards-based business OS-powered digital solutions to leading organizations within Nigeria and beyond. Infonomics is positioned to support enterprises as an accredited System Integrator and Access Point Provider, connecting ERP, billing and finance platforms to the NRS MBS e-Invoice ecosystem.

- System integration role** Translate ERP data, business rules and tax requirements into compliant NRS-ready invoice payloads.
- Access point role** Provide the controlled gateway for secure submission, response handling and customer delivery.
- Enterprise assurance** Deliver validation, credential control, immutable logging, traceability and resubmission governance.

Client Value at a Glance

InvoBridge reframes compliance as a managed, reusable integration asset.

Lower delivery risk

Use established integration patterns instead of new bespoke builds.

Faster compliance

Pre-built connectors, schemas and validation rules reduce delivery time.

Operational clarity

A single control point for status, exceptions and resubmissions.

Smarter cost management

Reuse what already works and configure only where necessary.

Why e-Invoicing Matters

The regulatory shift is no longer just an IT project. It is a compliance, finance and audit-control priority.

1

Regulatory mandate

NRS compliance is non-negotiable for enterprises.

2

Risk of penalties

Errors can lead to fines, rework and reputational damage.

3

Future proofing

Modernization prepares the business for digital operations.

What InvoBridge Does

An ERP-agnostic gateway that connects existing financial systems to the NRS MBS platform.

End-to-End Transaction Lifecycle

From invoice creation to customer delivery and audit-ready reporting.

Designed to eliminate manual complexity while preserving control points for Finance, Tax, IT and Audit.

InvoBridge Architecture

Lambda-like architecture for Near real-time API and end-of-day batch processing, with upload options for users without direct integration.

Integration Channels / Upload Modes

System-to-System Integration

- REST APIs for near/real-time invoice transmission
- Secure File Drop for scheduled batch uploads

Manual User Upload Interface

- Web-based drag-and-drop file upload
- Supports Excel and flat files for users without direct system integration
- Uploaded files are validated, processed, and queued for automated submissions

●	Connectors	REST API, secure file drop, CSV, JSON and XML.
●	Data domains	Invoices, customers, items, taxes, cancellations and payments.
●	Mapping engine	Configurable field mappings and ERP line transformations.
●	Upload modes	System integration, batch files and web drag-and-drop.

Architecture: ERP via InvoBridge

InvoBridge: Validation and Compliance Controls

Catch issues before they become NRS rejections, audit exceptions or customer delivery delays.

Pre-submission checks

Required fields, customer email, TIN, tax breakdown, totals and currency rules.

NRS ruleset alignment

Structure, codes, date formats and corrective flows are validated before submission.

Business controls

Maker-checker can be added where approval control is required.

e-submission checks

Customer email
TIN
Tax breakdown
Totals

FIRS ruleset

- Structure
- Codes
- Date formats
- Corrective flows

Business rules

- Maker-checker can be added on request

InvoBridge: Submission to NRS-MBS

Secure transport, multiple processing modes and resilience for failed records.

Transport

JSON over HTTPS with OAuth2 credentials per entity.

Modes

Real-time API plus scheduled catch-up and backfill batch processing.

Resilience

Retry attempts and dead-letter queues for controlled manual retry.

InvoBridge: Response Handling and Write-Back

Status visibility across every transaction, from pending to accepted, rejected or corrected.

Capture

IRN, QR Code, ACK or reject status and reference IDs.

Guide

Resubmission flow after rejection or correction.

Update

Optional ERP write-back to custom fields or tables available on request.

Capture

IRN/QR code
ACK/REJECT
status
reference IDs

Status lifecycle

guided resubmits

Write-back

optional status/
keys update to
ERP (e.g. custom
fields/tables)
available on request

InvoBridge: Monitoring, Audit and Security

A single operating view for queues, exceptions, exports and immutable evidence.

Realtime views

Queues, success, failure and resubmits.

Filters and drill-downs

Slice by invoice content and exception class.

Exports and schedules

CSV and XLSX outputs for reporting.

Security baseline

OAuth2, TLS, credential vaulting and RBAC.

Onboarding Process

We assess People, Process and Technology to ensure a smooth integration and successful take off.

InvoBridge: Implementation Roadmap

A practical route from assessment to controlled go-live.

Outcome, a compliant e-invoicing gateway operating with traceability, exception management and lower delivery risk.

Benefits of Integration via InvoBridge

	Criteria	ERP via InvoBridge
	Compliance Visibility	 High
	Audit & Logging	 End-to-End
	Speed of Implementation	 Faster
	Scalability	 Yes
	Integration Cost	 Lower
	Deployment Risk	 Controlled

A more compliant,
secure and efficient
e-invoicing journey.

Demo Flow

A simple path to show how one invoice moves through the platform.

This flow demonstrates extraction, validation, submission, response handling and dashboard visibility in one narrative.

Conclusion

Implementing InvoBridge, a business OS-driven e-invoicing solution, reduces costly errors, improves team efficiency, supports regulatory compliance and prepares the business for scalable digital operations.

Recommended next step

Confirm ERP sources, data readiness and target rollout plan.

Thank You

Together towards a more
compliant and efficient tomorrow.
