

From Invoice Creation to NRS Compliance

The ERP-agnostic control layer that connects your existing systems to the NRS MBS platform — without forcing a process change.

WHY THIS MATTERS NOW

NRS e-Invoicing is non-negotiable

The Merchant-Buyer Solution (MBS) requires structured pre-clearance of B2B invoices. Non-compliance carries fines, VAT recovery risk and reputational exposure.

Regulatory Mandate

Large taxpayers already in scope. Medium and smaller businesses are being phased in. Deadlines are firm.

Penalty & Recovery Risk

Errors trigger fines. Non-compliant invoices can block VAT reclaim and create audit findings.

Operational Strain

Real-time validation, IRN/QR handling, retries and status tracking quickly overwhelm manual or partial solutions.

THE STRATEGIC CHALLENGE

Moving from traditional invoicing to real-time NRS clearance

Most organisations face the same tension: keep existing ERP and finance processes intact while meeting a strict, real-time regulatory obligation that demands validation, IRN/QR generation, secure exchange and full auditability.

Process & System Risk

- ERP modules may be rigid or incomplete for NRS rules
- Multiple entities and systems create mapping complexity
- Manual workarounds increase rejection and rework

Control & Visibility Gap

- No single view of status across Finance, Tax and IT
- Exceptions and resubmissions become firefighting
- Audit trail is fragmented or missing

INTRODUCING INVOBRIDGE

The control layer between your business and NRS

InvoBridge is an ERP-agnostic gateway that sits between your existing finance systems and the NRS MBS platform. It handles validation, approval, compliant payload preparation, secure submission, response handling and ongoing monitoring — so compliance becomes part of the normal invoice process.

1

ERP-Agnostic

Works with your current systems via API, file or native entry

2

Control First

Validation and approval before any regulatory submission

3

Full Lifecycle

From capture through IRN/QR, status, retry and audit

4

Proven Patterns

Built on reference patterns developed with early NRS work

END-TO-END JOURNEY

What happens to an invoice

The user experiences one controlled business process. InvoBridge manages the compliance steps behind it.

Business outcome: one controlled journey from invoice creation to compliance confirmation — with full visibility and an immutable audit trail.

OPERATING MODEL

Fits around the way your business already works

The compliance layer remains consistent even when the invoice source changes.

1

Integration-led

Keep your existing ERP/accounting process. InvoBridge receives invoice data, applies controls and manages NRS submission.

Best for mature ERP environments

2

Native invoicing

Users raise invoices directly in InvoBridge, follow review/approval steps, then submit to NRS.

Best where a standard controlled process is needed

3

Hybrid

Some invoices arrive from enterprise systems; others are created or uploaded directly.

Best for multi-entity or multi-system groups

CAPTURE & CONTROL

Multiple entry points. Consistent controls before submission.

Native

Create invoices directly
in InvoBridge

ERP / Accounting

Receive data from
existing systems

Excel Upload

Controlled bulk
processing via portal

Secure File / MFT

Scheduled or batch file
exchange

REST API

Real-time system-to-
system automation

Control before it leaves the organisation

1

Invoice received

Draft or source-system data

2

Validation

Mandatory data & business
rules

3

Review / Approval

Internal authorisation

4

Ready for submission

Only approved invoices
proceed

Consistent preparation. Secure path to NRS MBS.

1

Reference / IRN

Generate and manage invoice reference information throughout the lifecycle

2

QR Code

Generate QR data and image; retain source data for regeneration if needed

3

Transform

Convert invoice data into the NRS-required payload structure

4

Package & Dispatch

Prepare the approved transaction and send securely via Gateway / APP

Know what happened to every invoice

Queued

Sent

Completed

Rejected

Retry

Exception Review

See error information and identify invoices that need correction or follow-up before they become bigger problems.

Retry & Reprocessing

Correct failed transactions and move them back through the processing flow with guided resubmits.

Audit & Reporting

Immutable logs, workflow history, dashboards and exports give Finance, Tax and Audit a complete record.

What the organisation gains

Compliance becomes part of the normal invoice process rather than a separate manual activity.

Lower compliance risk

Validate and control invoices before regulatory submission. Stop avoidable rejections after the invoice has already gone to the customer.

Faster time-to-compliance

Pre-built NRS connectors, schemas and validation rules help you achieve compliance in weeks, not months.

Operational clarity

One point of control for status, exceptions and resubmissions. Finance and Tax stay ahead of the curve.

Stronger governance

Approvals, immutable payload logs and processing history support audit and accountability.

Flexible adoption

Start with uploads or native invoicing and progress to full ERP integration without changing the compliance layer.

Smarter cost management

Reuse what already works. Configure only where needed. Avoid expensive bespoke rebuilds.

Proven in Nigeria. Built for NRS e-Invoicing.

Enterprise-grade delivery

Over ten years deploying scalable, standards-based digital solutions to leading organisations across Nigeria.

NRS e-Invoicing expertise

Worked closely with NRS at the outset of the e-invoicing initiative. Established reference patterns for validation, IRN/QR handling, acknowledgements and resubmission controls.

Lower delivery risk

Pre-built connectors, ready-made schemas and proven integration approaches reduce uncertainty and shorten timelines.

Designed for control

Maker-checker workflows, immutable payload logging and comprehensive traceability are standard — giving Finance, Tax and Audit a robust control environment.

From current landscape to monitored production

1

Assess

Invoice sources,
process, controls and
data readiness

2

Configure

Integration approach,
validation rules and
approval workflows

3

Test

End-to-end invoice and
response scenarios
with NRS

4

Operate

Go-live, monitoring,
support and continuous
reporting

Start where you are. Scale as your systems and volumes grow.

invoBridge

From invoice creation to compliance confirmation.

Keep control of your invoicing. Stay compliant with NRS —
without forcing your organisation into a single source or operating model.

Next step: Schedule a discovery conversation or readiness assessment.
