

EXECUTIVE SUMMARY

invoBridge: e-Invoicing compliance in one controlled process

A business-ready platform for creating, validating, approving, submitting and monitoring compliant invoices — without disrupting existing ERP or accounting operations.

What FIRS / NRS requires: Businesses above the applicable revenue threshold must transmit invoices to the e-invoicing platform within the mandated window. Non-compliant invoices create penalty, VAT recovery and audit risk.

CREATE / CAPTURE

Raise invoices directly, upload Excel, receive ERP/API transactions or process MFT/watch-folder files.

VALIDATE

Check mandatory fields, tax values, structure, customer/supplier data and readiness before submission.

APPROVE

Apply internal review and approval controls so only cleared invoices move to regulatory submission.

SUBMIT

Generate compliant payloads and dispatch approved invoices through the Gateway / Access Point route.

TRACK

Monitor queued, sent, successful, rejected and failed invoices with clear operational status visibility.

RESOLVE / REPORT

Review exceptions, retry failed items, preserve audit evidence and produce management reports.

Executive message: InvoBridge gives management a single operating control layer for compliant enterprise invoicing.

BUSINESS USE CASE

What each team gets from InvoBridge

Positioned as an operational workspace for finance, tax, IT and management — not just a technical transmission tool.

Finance / Billing

Create or import invoices, validate values, confirm readiness and track submission outcomes.

Tax / Compliance

Ensure invoices meet FIRS/NRS rules, review rejections, manage evidence and compliance reporting.

Operations

Monitor queues, exceptions, retries and payment update processing.

IT / Integration

Connect ERP/accounting sources, file channels and APIs without changing core systems.

Management

View status, risk, exceptions and operational KPIs across entities and invoice sources.

Typical user flow

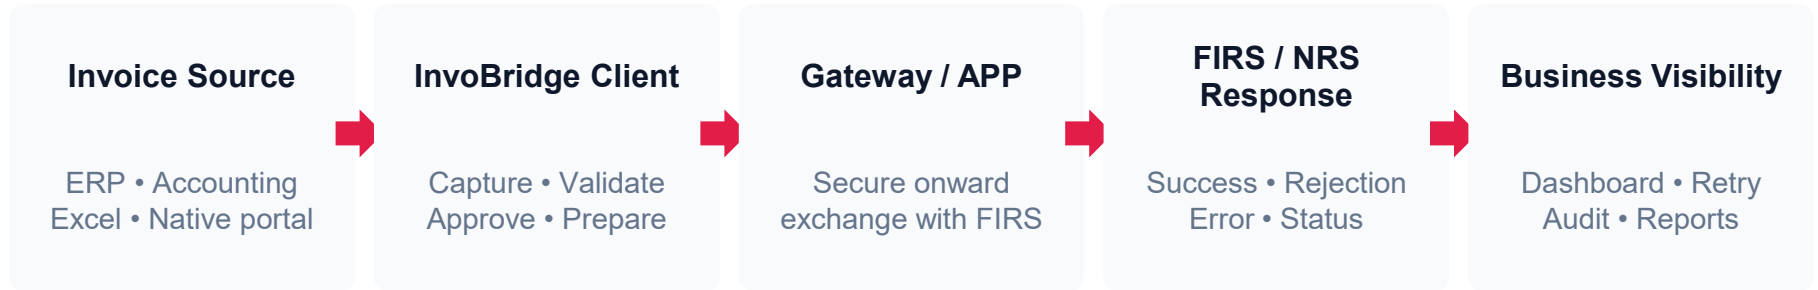

- 1 Capture
- 2 Validate
- 3 Approve
- 4 Submit
- 5 Track
- 6 Resolve

Outcome: fewer manual handoffs, earlier error detection, clearer responsibility and stronger audit readiness.

EXECUTIVE VIEW

How InvoBridge delivers FIRS / NRS readiness

A simple business journey from invoice source to compliance confirmation.

BUSINESS IMPACT

- Reduces manual compliance work and preventable rejections
- One monitored process across entities and sources
- Improves finance, tax, ops and audit visibility from day one

PROPOSED ENGAGEMENT

- Assess invoicing, ERP and integration landscape
- Configure integration, validation and approval controls
- Deploy Gateway route, test, go live and support

Bottom line: InvoBridge gives management a controlled, auditable and scalable path to e-invoicing compliance.
